SUMMARY

Computer Science undergraduate and Full Stack AI Engineer building production-ready AI systems for Healthcare, Education, and Warehouse Intelligence. Skilled in RAG, Agentic AI, multi-agent LangGraph workflows, and secure React/Node full-stack applications. Strong fundamentals in Java, Python, JavaScript, DSA (500+ problems), and DBMS, with AI-assisted development workflows and high ownership across the SDLC. CGPA: 8.85/10.

EXPERIENCE

Full Stack AI Engineer Intern — Pratinik Infotech Pvt Ltd

May 2025 – Jul 2025

- Developed full-stack MERN applications using React.js, Node.js, Express.js, and MongoDB; built and integrated REST APIs, optimizing MongoDB schemas for efficient, scalable data management.
- Independently owned features end-to-end in an Agile team — from design through debugging, API testing, and deployment — demonstrating initiative and high ownership in a real product environment.

PROJECTS

RAG-based Document Q&A Chatbot

May 2026 – Aug 2026

LangChain — Python — Node.js — React.js — OpenAI API — Pinecone — MongoDB

- Built a RAG chain that answers queries over uploaded documents (PDF/DOCX) with source-grounded responses, applicable to document-heavy workflows in healthcare and education.
- Built a document ingestion pipeline (chunking, embeddings, Pinecone vector storage) and 6+ REST APIs for upload, query, and retrieval.
- Designed a modular RAG orchestration layer in LangChain, handling multi-document context windows and source citation mapping.
- Built a React.js chat UI with streaming responses, citation highlighting, and conversation history persisted in MongoDB.
- Informally evaluated retrieval accuracy and response groundedness across test queries to tune chunking size and retrieval parameters.

Multi-Agent Research Assistant with LangGraph

Aug 2026 – Sep 2026

LangGraph — LangChain — Python — Node.js — OpenAI API — FAISS — React.js

- Designed a stateful multi-agent (Agentic AI) workflow (planner, retriever, executor) as a cyclic graph with conditional edges, retries, and human-in-the-loop checkpoints.
- Built planner, retriever, and executor agent nodes with distinct system prompts and tool bindings, coordinated through LangGraph's state graph API.
- Implemented LangGraph checkpointing for persistent state and tool-calling agents for task decomposition.
- Integrated FAISS for local vector retrieval and OpenAI function calling for structured tool invocation within the agent loop.
- Improved accuracy on multi-hop queries over a single-chain RAG baseline; built a React.js view to trace agent state transitions and tool calls.

AI Mock Interview Platform

Jan 2026 – Apr 2026

React.js — Node.js — Express.js — MongoDB — OpenAI API

- Built an education-technology platform generating role-based technical interview questions via the OpenAI API.
- Developed 8+ secure REST APIs with JWT-based authentication and role-based access control.
- Designed MongoDB schemas for interview sessions, question banks, and user performance history.
- Developed 10+ reusable React components with speech recognition for real-time answer transcription.
- Built an OpenAI-based evaluation pipeline that scores responses and generates personalized feedback.

Real-Time Video Call Application

Nov 2025 – Dec 2025

React.js — Node.js — Express.js — WebRTC — Socket.io

- Built a real-time peer-to-peer video calling application using WebRTC for media streaming and Socket.io as the signaling server.
- Implemented room-based session management with dynamic ICE candidate exchange and STUN/TURN configuration for NAT traversal.
- Added multi-user room support with mute/camera toggle and screen-sharing controls.
- Built a responsive React.js UI for call controls, participant grid, and connection status indicators.
- Handled peer disconnect/reconnect edge cases to improve call stability and reduce reconnection latency.

TECHNICAL SKILLS

- Languages:** Java, Python, JavaScript, C, SQL
- AI/ML:** RAG, Agentic AI, Multi-Agent Systems, LangChain, LangGraph, LLMs, OpenAI API/GPT, Prompt Engineering, Tool/Function Calling, Vector Embeddings, Semantic Search, Vector DBs (Pinecone, ChromaDB, FAISS)
- Frontend:** React.js, HTML5, CSS3, Responsive Web Design, UI/UX Fundamentals
- Backend:** Node.js, Express.js, Python (scripting/automation), RESTful API Design, JWT Auth, WebRTC, Socket.io, STUN/TURN, Middleware
- Databases:** MySQL, PostgreSQL, MongoDB (Atlas / Cloud-Hosted), Database Design & Optimization, Schema Design
- AI Dev Tools:** GitHub Copilot, Cursor, Claude Code — AI-assisted code generation, debugging, and refactoring
- Tools & Practices:** Git, GitHub, Postman, VS Code, Agile/Scrum, SDLC, API Testing & Debugging
- Core CS:** Data Structures & Algorithms (500+ Problems), OOP, DBMS, Operating Systems, System Design Fundamentals

EDUCATION

RGUKT, Srikakulam — B.Tech, Computer Science and Engineering

2023 – 2027

CGPA: 8.85/10

RGUKT, Srikakulam — Pre-University Course (PUC)

2021 – 2023

GPA: 9.30/10

ACHIEVEMENTS

- Solved 500+ DSA problems across LeetCode and GeeksforGeeks, strengthening core problem-solving and algorithmic fundamentals.
- Completed a 3-month Full Stack AI Engineer internship with independent, end-to-end feature ownership in a real Agile product team.
- Built 4 production-style AI-native projects — RAG pipelines, LangGraph multi-agent workflows, and LLM-powered platforms — spanning healthcare, education, and workflow-automation use cases.
- Developed 24+ REST APIs and 36+ reusable React components across multiple MERN projects, independently owning each from design to deployment.
